

Real World Data Solutions

Employ powerful Real World Data to select advantageous sites with dense patient pools matched to your protocol's I/E criteria

80% of clinical trials experience delays due to recruitment challenges because, most often, sites are selected based on existing relationships and not on validated patient accessibility.

But breaking away from the traditional methods of identifying and engaging sites can be difficult and time consuming.

Citeline RWD Solutions simplifies this realignment in your planning activities with a verified data-driven approach that pairs relevant patient volumes with rich clinical trial experience data from Citeline, allowing you to:

Validate sites to ensure they have direct access to protocol-matched patients

Evaluate geographical limitations between patients and sites that may impede recruitment and retainment efforts

Proactively develop a contingency site list to employ, should recruitment decelerate

Finding yourself in a position where your activated sites aren't recruiting well?

Our Real World Data solutions can also leverage similar tactics to:

This realignment of resources can put you on a path to better outcomes.

Whether you're planning for an upcoming study or working to get your study back on track, Citeline is here to support you.

FEASIBILITY & SITE SELECTION

Identify sites with dense pools of clinically and demographically relevant patients matched to the protocol's I/E criteria

Layer on clinical trial experience data for site prioritization

TRIAL RESCUE

Analyze existing sites to identify high volume opportunities for re-prioritization

Identify non-sponsor sites to unmask additional reservoirs of relevant patients

Click [here](#) to learn how you can leverage Citeline RWD Solutions to enhance feasibility assessments, select optimal trial sites from the start and, when necessary, support trial rescue efforts.
